

Отчет к ДЗ Взаимодействия со словарями

Задачи:

1. Создать таблицу с полями:
user_id UInt64,
action String,
expense UInt64
2. Создать словарь, в качестве ключа user_id, в качестве атрибута email String, источник словаря любой вам удобный, например file.
3. Наполнить таблицу и источник любыми данными, с низкоординальными значениями для поля action и хотя бы по несколько повторяющихся строк для каждого user_id
4. написать SELECT, возвращающий:
 - email при помощи dictGet,
 - аккумулятивную сумму expense, с окном по action
 - сортировка по email

1. Создаем таблицу

```
NB-R911LJCT.o3.ru :) CREATE TABLE user_actions (  
    user_id UInt64,  
    action String,  
    expense UInt64  
) ENGINE = MergeTree()  
ORDER BY user_id;  
  
CREATE TABLE user_actions  
(  
    `user_id` UInt64,  
    `action` String,  
    `expense` UInt64  
)  
ENGINE = MergeTree  
ORDER BY user_id  
  
Query id: 81eabbe4-d4f1-4e4c-94ca-97b2bf0a830f  
  
Ok.  
  
0 rows in set. Elapsed: 0.022 sec.  
  
NB-R911LJCT.o3.ru :) |
```

2. Создать словарь из файла csv.

```
NB-R911LJCT.o3.ru :) CREATE DICTIONARY user_emails
(
    user_id UInt64,
    email String
)
PRIMARY KEY user_id
SOURCE(file(PATH 'var/lib/clickhouse/user_files/users.csv' FORMAT 'CSVWithNames'))
LIFETIME(MIN 1 MAX 1)
LAYOUT(flat);

CREATE DICTIONARY user_emails
(
    `user_id` UInt64,
    `email` String
)
PRIMARY KEY user_id
SOURCE(FILE(PATH 'var/lib/clickhouse/user_files/users.csv' FORMAT 'CSVWithNames'))
LIFETIME(MIN 1 MAX 1)
LAYOUT(FLAT)

Query id: ec780c89-b0a6-4c1a-81a4-b573b9cc468d

Ok.

0 rows in set. Elapsed: 0.014 sec.
```

```

3. Наполнить таблицу и источник любыми данными

```
NB-R911LJCT.o3.ru :) INSERT INTO user_actions (user_id, action, expense) VALUES
(1, 'login', 100),
(1, 'logout', 50),
(1, 'login', 150),
(2, 'login', 200),
(2, 'logout', 100),
(2, 'login', 250),
(3, 'login', 300),
(3, 'logout', 150);
```

4. SELECT, возвращающий:

- email при помощи dictGet,
- аккумулятивную сумму expense, с окном по action
- сортировка по email

```
NB-R911LJCT.o3.ru :) SELECT
  dictGet('user_emails', 'email', user_id) AS email,
  action,
  sum(expense) OVER (PARTITION BY action ORDER BY user_id ROWS BETWEEN UNBOUNDED PRECEDING AND CURRENT ROW) AS cumulative_expense
FROM
  user_actions
ORDER BY
  email;

SELECT
  dictGet('user_emails', 'email', user_id) AS email,
  action,
  sum(expense) OVER (PARTITION BY action ORDER BY user_id ASC ROWS BETWEEN UNBOUNDED PRECEDING AND CURRENT ROW) AS cumulative_expense
FROM user_actions
ORDER BY email ASC
```

Query id: b7a97e49-cd0f-4288-88f2-fb9f0f447901

	email	action	cumulative_expense
1.	user1@example.com	login	100
2.	user1@example.com	login	250
3.	user1@example.com	logout	50
4.	user2@example.com	login	450
5.	user2@example.com	login	700
6.	user2@example.com	logout	150
7.	user3@example.com	login	1000
8.	user3@example.com	logout	300
